

1. Download the tar file from below location and extract the tar file

- a. wget <https://irisivdx.coraltele.com/virtual-machines/hp/debian-12-openvpn.tar.gz>
- b. tar xvfz [debian-12-openvpn.tar.gz](#)
- c. cd openvpn
- d. run `./install-openvpn` script then **press 2** for install in offline mode or **press 1** for install online mode.
- e. After installation run `./config-openvpn` script and type yes at the end of the script when asked.

2. add, revoke, update the client profile.

For Create — `./openvpn-client-manager` add <client-name>
For Modify — `./openvpn-client-manager` update <client-name>
For Delete — `./openvpn-client-manager` revoke <client-name>

3. Modify the ip address pool for clients.

`./modify-openvpn-subnet` press enter to continue

New VPN subnet (e.g. 10.9.0.0): 10.11.0.0

New VPN mask (e.g. 255.255.255.0): 255.255.255.0
